PYRAGRID

Wildfire prevention & operations intelligence.
Know the threat. Rehearse the response.

www.pyragrid.com

PROBLEM

in Spain in 2025, only **0.77%** of wildfire incidents became large fires over **500 hectares**, but **those fires accounted for 87.42% of the total forest area burned.**

63 large fires → 310,108 ha BURNED !

Source: MITECO, provisional 2025 wildfire statistics.

THE GAP

The data exists. The decision is still fragmented.

Weather

Satellite data

Terrain maps

Sensors

Emergency plans

**PYRAGRID connects
the signals to the decision.**

Prevent → Prepare → Respond → Learn

WHY PYRAGRID

We don't replace wildfire data. We turn it into local operations.

EXISTING WILDFIRE INTELLIGENCE

satellites
weather feeds
cameras
public alerts
data suppliers

PYRAGRID OPERATIONAL LAYER

local assets
roads + water
PyrNodes
operating procedures
priority zones

LOCAL DECISIONS

where to intervene
what to prepare
what changes now
who acts first
what is exposed

Not another fire detector. A wildfire decision system.

INCIDENT SIMULATION

Press one button. Watch the site switch from normal operations to emergency response.

NORMAL MODE

Fire risk: Low

Water tank: 80%

Road: Open

Priority: Normal operations

SIMULATE FIRE

A wildfire starts near Zone B

EMERGENCY MODE

Fire detected near Zone B

Wind shifts east

Water tank: critical resource

Vehicle reassigned for support

One access road unsafe

People / assets flagged

Emergency services become priority

Normal work postponed

WHY IT MATTERS from static monitoring to live operational decision support.
PYRAGRID shows how decisions change when an emergency begins.

THE MVP

The MVP starts with 2 hectares.

01 —

DIGITAL TWIN

Map the challenge property: terrain, vegetation, house, roads, water, risk zones.

02 —

PYRANODES

Small field devices measuring local environmental conditions such as temperature, humidity and soil moisture.

03 —

LIVE DASHBOARD

Current risk.
Why risk is changing.
Priority zones.
Assets exposed.

04 —

INCIDENT SIMULATION

Trigger a simulated fire.
Watch conditions and priorities change.

05 —

AFTER-ACTION REPORT

What happened?
What accelerated risk?
What should change before next season?

Real land. Real data. Working prototype.

COMPETITIVE LANDSCAPE

We do not compete on detection alone.

PYRAGRID sits above existing wildfire intelligence and translates it into site-level action.

GO TO MARKET

1

START WITH

**PRIVATE FORESTRY &
LAND OPERATORS**

Galicia + North Spain

2

SELL

€25K PAID PILOT

5–10 sites
50% upfront

3

THEN

**CONVERT → EXPAND
→ SCALE**

Private operators first. Utilities later.

BUSINESS MODEL

Pilot first. Recurring by design.

PAID PILOT
€25,000

3 months • 5–10 sites • Risk mapping • Dashboard • Field integration • Alerts • Reports

ANNUAL DEPLOYMENT
€45K–€60K+ / year

Monitoring • Operational layer • Readiness drills • Support

EXPANSION

More sites • PyraNodes • API integrations • Custom reports

Hardware gets us into the field.
Software creates recurring margin.

20K → CUSTOMER #1

€20K START

- €6k software MVP
- €4k PyraNodes
- €3k GIS + fire expertise
- €2k cloud + data
- €2k legal + insurance
- €3k sales + field testing

FIRST €25K PILOT

**50% upfront =
€12.5K**

CUSTOMER-FUNDED

SCALE

We build small. Sell early. Let customers finance growth.

THE 100K MISSION

Can PyraGrid generate >€100K NET profit in 12 months?

~~€310K~~ REVENUE
~~€203K~~ COSTS

≈

~~€107K~~
NET PROFIT

THE MISSION CLEARS

Includes €18K local hire + 0% Year-1 corporate tax under injected scenario + ≈€16K in modeled costs

GRACIAS

PYRAGRID

Know the threat. Rehearse the response.

www.pyragrid.com

Q&A

WHY SAN XOÁN

The lab is local. The market is global.

2 HECTARES

Living readiness lab

STONE HOUSE

Product + monitoring base

UTILITY VEHICLE

Field deployment unit

€20,000

Launch capital

LOCAL HIRE

Field operations

Start with 2 hectares. Scale across thousands of sites.

BUILD

PROVE

SELL

SCALE

3 SHOCKS SAME BUSINESS

STRESS TESTS !

SHOCK 1: LOGISTICS

Rural pickup → 1 day/week

Software/service-led business

Batch hardware deliveries

Keep core PyraNode inventory locally

Low impact on recurring revenue.

SHOCK 2: LOCAL EMPLOYMENT

Hire locally → Year1 tax exemption

Hire Field Operations & Readiness

Coordinator : Deployment / Maintenance /

Site mapping / Readiness exercises

Useful role, not compliance-only hiring.

SHOCK 3: COST SPIKE ENERGY / FUEL / TELECOM +40%

Higher connectivity + field-operation costs

Conservative impact: +€16K costs

€187K → €203K total costs

Still ≈ €107K net profit.

MARKETING STRATEGY.

From awareness to paid pilots.

MESSAGE

- Know the threat
- Rehearse the response
- Prove readiness

CHANNELS

- Demo-site case study
- Incident-simulation videos
- LinkedIn + direct outreach
- Live demos / webinars
- Partner intros

FUNNEL

- 1 Awareness
- 2 Credibility
- 3 Discovery calls
- 4 Paid pilot
- 5 Expansion

PRIVATE OPERATORS FIRST. CREDIBILITY FAST.

Galicia → North Spain → Iberia
